

NEW LOW IMPACT DEVELOPMENT REQUIREMENTS DEVELOPMENT STANDARDS PLAN

**4-6 pm - Thursday July 12, 2007
City of Salinas Rotunda
(At the corner of Lincoln and Gabilan)
200 Lincoln Avenue, City of Salinas**

Significant changes to development design standards are mandated by the City of Salinas 2005 National Pollutant Discharge Elimination System (NPDES) permit with the state Regional Water Quality Control Board. The new standards will incorporate required Low Impact Development (LID) strategies for the treatment and management of storm water runoff. New development and significant redevelopment in the city will be required to comply with these new standards.

A workshop to introduce these changes in the City of Salinas will be held on Thursday, July 12, 2007 at 4:00 pm in the City of Salinas Rotunda at 200 Lincoln Avenue, in the City of Salinas.

This workshop will provide

- ☐ A review of the Kennedy/Jenks Development Standards Plan, a Low Impact Development guidance document which details Best Management Practices (BMPs) that will be required at residential, commercial, and industrial developments in the City of Salinas.

This Workshop is the third and final in a series of workshops conducted by the environmental engineering firm of Kennedy/Jenks Consultants and sponsored by the Central Coast Regional Water Quality Control Board for the City of Salinas. The first workshop highlighted development requirements for large planned future developments. The second workshop reviewed NPDES permit requirements and Low Impact Development concepts and the final workshop will focus on the Development Standards Plan.

The general public, especially those involved in the planning and design new facilities and redevelopment, are encouraged to attend and participate.

These workshops are sponsored by the Central Coast Regional Water Quality Control Board.
